To open project without dev essentials/locally: Open project's `index.html` in the `public/` folder.

Contributing

Pre-requisites:

- [npm 6+](#)
- [node.js 13.1+](#)

1. Navigate to project root directory (*in terminal/bash*)
2. run `npm install` or `npm i` on a terminal/bash
3. run `npm` scripts depends on what you want/need.
 - `npm` scripts available:
 - `lint` - lints the whole project source code.
 - `start` - starts the website with HMR support (*Developer Use*)
 - `build` - compiles for production build

Tools

Packages:

- [React.js](#) (*Manual Setup*)
- [Bulma CSS](#)
- [styled-components](#)
- [react-particles-js](#)

Code Quality

- [Prettier](#) - Formatter
- [Eslint](#) - Static Code Analysis/Linting (*for JavaScript*)
- [Stylelint](#) - Static Code Analysis/Linting (*for Styles*)
- [CodeFactor](#) - Code Review

Tools:

- [TravisCI](#) - Continuous Integration & Testing
- [ZEIT Now](#) - Continuous Deployment to Registered Domain
- [WhiteSource Bolt](#) - Dependencies Vulnerability Watcher
- [Renovate](#) - Dependencies Updates
